SOLIDWORKS® 2016

Surface Modeling

Dassault Systèmes SolidWorks Corporation
175 Wyman Street
Waltham, Massachusetts 02451 USA
The information and the software discussed in this document are subject to change without notice and are not commitments by Dassault Systemes SolidWorks Corporation (DS SolidWorks). No material may be reproduced or transmitted in any form or by any means, electronically or manually, for any purpose without the express written permission of DS SolidWorks.

The software discussed in this document is furnished under a license and may be used or copied only in accordance with the terms of the license. All warranties given by DS SolidWorks as to the software and documentation are set forth in the license agreement, and nothing stated in, or implied by, this document or its contents shall be considered or deemed a modification or amendment of any terms, including warranties, in the license agreement.

**Patent Notices**

SOLIDWORKS®, 3D mechanical CAD and/or Simulation software is protected by U.S. Patents 5,815,154; 6,219,049; 6,219,055; 6,611,725; 6,844,877; 6,898,560; 6,906,712; 7,079,990; 7,477,262; 7,558,705; 7,571,079; 7,590,497; 7,643,027; 7,672,822; 7,688,318; 7,694,238; 7,853,940; 8,305,376; 8,581,902; 8,817,028; 8,910,078; 9,129,083 and foreign patents. (e.g., EP 1,116,190 B1 and JP 3,517,643).

eDrawings® software is protected by U.S. Patent 7,184,044; U.S. Patent 7,502,027; and Canadian Patent 2,318,706.

U.S. and foreign patents pending.

**Trademarks and Product Names for SOLIDWORKS Products and Services**

SOLIDWORKS, 3D ContentCentral, 3D PartStream.NET, eDrawings, and the eDrawings logo are registered trademarks and FeatureManager is a jointly owned registered trademark of DS SolidWorks.

CircuitWorks, FloXpress, PhotoView 360, and TolAnalyst are trademarks of DS SolidWorks.

FeatureWorks is a registered trademark of Geometric Ltd.

Other brand or product names are trademarks or registered trademarks of their respective holders.

**COMMERCIAL COMPUTER SOFTWARE - PROPRIETARY**

The Software is a “commercial item” as that term is defined at 48 C.F.R. 2.101 (OCT 1995), consisting of “commercial computer software” and “commercial software documentation” as such terms are used in 48 C.F.R. 12.212 (SEPT 1995) and is provided to the U.S. Government (a) for acquisition by or on behalf of civilian agencies, consistent with the policy set forth in 48 C.F.R. 12.212; or (b) for acquisition by or on behalf of units of the Department of Defense, consistent with the policies set forth in 48 C.F.R. 227.7202-1 (JUN 1995) and 227.7202-4 (JUN 1995).

In the event that you receive a request from any agency of the U.S. Government to provide Software with rights beyond those set forth above, you will notify DS SolidWorks of the scope of the request and DS SolidWorks will have five (5) business days to, in its sole discretion, accept or reject such request. Contractor/Manufacturer: Dassault Systemes SolidWorks Corporation, 175 Wyman Street, Waltham, Massachusetts 02451 USA.

Contents

Introduction

About This Course ...................................................... 2
Prerequisites .......................................................... 2
Course Design Philosophy ........................................... 2
Using this Book ....................................................... 2
Laboratory Exercises .................................................. 2
A Note About Dimensions .......................................... 3
About the Training Files ............................................. 3
Training Templates .................................................... 3
Conventions Used in this Book ..................................... 4
Windows® 7 ............................................................... 4
Use of Color ............................................................ 5
Graphics and Graphics Cards ....................................... 5
Color Schemes .......................................................... 6
Icons .............................................................. 6
Hide/Show Tree Items .................................................. 6
More SOLIDWORKS Training Resources ....................... 6
Local User Groups .................................................... 6
Lesson 1
Understanding Surfaces

Solids and Surfaces ............................................. 8
What is a Solid? ..................................................... 9
Edges, not Holes ..................................................... 9
Behind the Scenes ................................................. 9
Introducing: Extruded Surface ............................. 10
Introducing: Planar Surface ................................. 11
Introducing: Trim Surface ..................................... 11
Introducing: Untrim Surface .................................. 13
Working with Surface Bodies .................................. 14
Introducing: Knit Surface ....................................... 14
Checking for a Closed Surface ......................... 15
Introducing: Thicken .............................................. 15
Decomposing a Solid into Surfaces ................. 17
Introducing: Delete Face ....................................... 17
Parameterization .................................................. 18
Introducing: Face Curves ....................................... 18
Surface Types ....................................................... 18
Why Use Surfaces? ............................................... 21
When Not to Use Surfaces ................................. 22
Hybrid Modeling ..................................................... 22
Continuity Explained ............................................ 22
Workflow with Surfaces ........................................ 24
Working with Images .......................................... 24
Layout Sketch ...................................................... 24
Identify Symmetry and Edges ......................... 26
Identify Functional Faces ................................... 27
Check your Models Frequently .......................... 27
Introducing: Verification on Rebuild ............. 27
Introducing: Check Entity ................................. 28
Folders in the FeatureManager Design Tree ...... 28
Clean-up ............................................................... 28
Exercise 1: Trimming Surfaces ......................... 29
Exercise 2: Trimming and Knitting ................. 32
Lesson 2
Introduction to Surfacing

Similarities Between Solid and Surface Modeling ................. 34
Basic Surfacing .......................................................... 34
  Introducing: Revolved Surface ...................................... 35
  Introducing: Swept Surface .......................................... 37
Filleting Surfaces ......................................................... 39
Cutting the Bottom ....................................................... 41
  Introducing: Radiate Surface ........................................ 41
  Introducing: Cut with Surface ....................................... 42
Flattening Surfaces ....................................................... 43
  Introducing: Surface Flatten ......................................... 43
Exercise 3: Basic Surface Modeling ................................. 45
  Introducing: Extend Surface ........................................ 46
Exercise 4: Halyard Guide .............................................. 49
Exercise 5: Finial Scroll ................................................. 55
  Introducing: Curve Through Reference Points .................. 59

Lesson 3
Solid-Surface Hybrid Modeling

Hybrid Modeling ......................................................... 62
Using Surfaces to Modify Solids ...................................... 63
  Display ....................................................................... 64
  Introducing: Replace Face ......................................... 66
Interchanging Between Solids and Surfaces ....................... 67
Performance Implications .............................................. 68
Surfaces as Construction Geometry ................................. 69
  Stages in the Process ................................................ 69
Alternative to Trim ....................................................... 75
  Introducing: Intersect ................................................. 75
  Changing a Solid With a Surface ................................. 75
  Solid from Imported Surfaces ...................................... 77
  Recreating a Molded Part .......................................... 78
Making Copies of Faces ................................................ 79
  Introducing: Offset Surface ........................................ 79
  Repairing Countersunk Hole Problem ........................... 80
Exercise 6: Camera Body .............................................. 83
Exercise 7: Finial Wrap ............................................... 85
Lesson 4
Repairing and Editing Imported Geometry

Importing Data .......................................................... 92
What to Import? ...................................................... 92
Why Do Imports Fail? ............................................... 93
Resulting Problems ................................................ 93
Repairing Models .................................................. 94
Workflow ............................................................... 94
Stages in the Process .............................................. 95
FeatureWorks ......................................................... 95
Repairing and Editing Imported Geometry .................. 96
Introducing: Import Diagnostics .............................. 97
Options for Deleting Faces ..................................... 98
Patching Holes ......................................................... 98
Introducing: Filled Surface ..................................... 99
Consistency Notification ......................................... 100
Another Strategy .................................................... 101
Editing Imported Parts .......................................... 104
Introducing: Delete Hole ....................................... 106
Exercise 8: Import Diagnosis ................................. 107
Exercise 9: Using Import Surface and Replace Face .... 111
Exercise 10: Using Surfaces to Create Solids ............. 114

Lesson 5
Advanced Surface Modeling

Stages in the Process .............................................. 120
Using Sketch Picture to Capture Design Intent .......... 121
Ruled Surfaces ......................................................... 126
Introducing: Ruled Surface ................................... 126
Lofting Surfaces ....................................................... 128
Adding a Loft Section ............................................ 131
An Alternative Approach ....................................... 133
Modeling the Lower Half ....................................... 134
Introducing: Partial Ellipse .................................... 136
Preparation for Using Filled Surface ......................... 138
Consistency Notification ....................................... 138
Deviation Analysis ................................................ 139
Gap Control ............................................................ 139
Conclusion .............................................................. 140
Design Changes ....................................................... 143
Dynamic Feature Editing ....................................... 144
Introducing: Instant3D ........................................... 144
Replacing a Face ..................................................... 145
Exercise 11: Mouse Model .................................... 149
Exercise 12: Bar of Soap ........................................ 158
Exercise 13: Handle ................................................ 164
Lesson 6
Blends and Patches

Complex Blends ........................................... 174
Stages in the Process .................................... 175
Splitting Trim Boundaries ............................... 178
The Cumulative Effect of Tolerances ................. 182
Implications for Mirroring .............................. 183
Hide/Show Bodies ........................................ 183
Hiding Individual Bodies ................................. 183
Trimming the Bottom Bracket ......................... 185
Wrap Feature ............................................... 185
Introducing: Isolate ...................................... 185
Smoothing Patches ....................................... 187
Three Alternative Approaches ......................... 187
Boundary Surface ....................................... 191
Introducing: Boundary Surface ....................... 191
Curvature Combs ........................................ 192
Freeform Feature ........................................ 194
Introducing: Freeform ................................ 195
Mesh Orientation ....................................... 196
Using the Triad .......................................... 198
Moving Control Points ................................ 199
Undoing Changes ....................................... 200
Boundary Conditions .................................. 201
Corner Blends ........................................... 204
Stages in the Process .................................. 204
Alternative Approach .................................. 207
Spline on Surface ....................................... 208
Introducing: Spline on Surface ....................... 208
Exercise 14: Bicycle Frame ......................... 212
Exercise 15: Patches .................................... 219
Exercise 16: Bathtub Fillet ......................... 226
Exercise 17: Corner Blend ......................... 229
## Lesson 7
### Master Model Techniques
