Patent Notices

SOLIDWORKS®, 3D mechanical CAD and/or Simulation software is protected by U.S. Patents 6,611,725; 6,844,877; 6,898,560; 6,906,712; 7,079,990; 7,477,262; 7,558,705; 7,571,079; 7,590,497; 7,643,027; 7,672,822; 7,688,318; 7,694,238; 7,853,940; 8,305,376; 8,581,902; 8,817,028; 8,910,078; 9,129,083; 9,153,072; 9,262,863; 9,465,894; 9,646,412; 9,870,436; 10,035,083; 10,073,600; 10,235,493 and foreign patents, (e.g., EP 1,116,190 B1 and JP 3,517,643).

eDrawings® software is protected by U.S. Patent 7,184,044; U.S. Patent 7,502,027; and Canadian Patent 2,318,706.

U.S. and foreign patents pending.

Trademarks and Product Names for SOLIDWORKS Products and Services

SOLIDWORKS, 3D ContentCentral, 3D PartStream.NET, eDrawings, and the eDrawings logo are registered trademarks and FeatureManager is a jointly owned registered trademark of DS SolidWorks.

CircuitWorks, FloXpress, PhotoView 360, and TolAnalyst are trademarks of DS SolidWorks.

FeatureWorks is a registered trademark of HCL Technologies Ltd.

Other brand or product names are trademarks or registered trademarks of their respective holders.

© 1995-2019, Dassault Systemes SolidWorks Corporation, a Dassault Systemes SE company, 175 Wyman Street, Waltham, Mass. 02451 USA. All Rights Reserved.

The Software is a “commercial item” as that term is defined at 48 C.F.R. 2.101 (OCT 1995), consisting of “commercial computer software” and “commercial software documentation” as such terms are used in 48 C.F.R. 12.212 (SEPT 1995) and is provided to the U.S. Government (a) for acquisition by or on behalf of civilian agencies, consistent with the policy set forth in 48 C.F.R. 12.212; or (b) for acquisition by or on behalf of units of the Department of Defense, consistent with the policies set forth in 48 C.F.R. 227.7202-1 (JUN 1995) and 227.7202-4 (JUN 1995).

In the event that you receive a request from any agency of the U.S. Government to provide Software with rights beyond those set forth above, you will notify DS SolidWorks of the scope of the request and DS SolidWorks will have five (5) business days to, in its sole discretion, accept or reject such request. Contractor/Manufacturer: Dassault Systemes SolidWorks Corporation, 175 Wyman Street, Waltham, Massachusetts 02451 USA.

## Introduction

About This Course .................................................. 2  
Prerequisites .......................................................... 2  
Course Design Philosophy .......................................... 2  
Using this Book ...................................................... 2  
Laboratory Exercises ................................................ 3  
Training Files ......................................................... 3  
Windows ................................................................. 3  
Conventions Used in this Book ..................................... 4  
Use of Color ............................................................. 4  
More SOLIDWORKS Training Resources ....................... 4  
Local User Groups .................................................... 4  
What is SOLIDWORKS Motion? ................................. 5  
What is Motion Simulation? ....... 5  
Understanding Basics ................................................. 5  
  Mass and Inertia .................................................. 5  
  Degrees-of-Freedom .............................................. 5  
  Constraining Degrees-of-Freedom ..................... 6  
Motion Analysis ...................................................... 6  
How is Motion Analyzed on the Computer? .................... 6
Basics of Mechanism Setup in SOLIDWORKS Motion .............. 7
  Rigid Body ............................................. 7
  Fixed Parts ........................................... 7
  Floating Parts ....................................... 8
  Mates .................................................... 8
  Motors ................................................... 8
  Gravity ............................................... 8
  Constraint Mapping Concept ....................... 8
  Forces ................................................... 8
Summary .................................................. 8

Lesson 1:
Introduction to Motion Simulation and Forces
Objectives ................................................. 9
Basic Motion Analysis ................................. 10
Case Study: Car Jack Analysis ..................... 10
  Problem Description ................................. 10
  Stages in the Process ............................... 11
  Driving Motion ...................................... 14
  Gravity ............................................... 16
Forces ..................................................... 17
  Understanding Forces ............................... 17
  Applied Forces ..................................... 17
  Force Definition .................................... 17
  Force Direction ...................................... 18
  Case 1 .................................................. 18
  Case 2 .................................................. 18
  Case 3 .................................................. 19
Results .................................................... 21
  Plot Categories ...................................... 21
  Sub-Categories ...................................... 21
  Resizing Plots ....................................... 21
Exercise 1: 3D Fourbar Linkage ....................... 28
Lesson 2:
Building a Motion Model and Post-processing

Objectives ................................................................. 31
Creating Local Mates .................................................. 32
Case Study: Crank Slider Analysis ................................. 32
  Problem Description ................................................ 32
  Stages in the Process ............................................... 32
Mates .............................................................................. 33
  Concentric Mate ....................................................... 34
  Hinge Mate ............................................................... 34
  Point-to-Point Coincident Mate ................................. 34
  Lock Mate ............................................................... 35
  Two Face-to-Face Coincident Mates ......................... 35
  Universal Mate ......................................................... 35
  Screw Mate ............................................................. 36
  Point-on-Axis Coincident Mate ................................. 36
  Parallel Mate .......................................................... 37
  Perpendicular Mate ................................................ 37
Local Mates ............................................................... 38
  Function Builder ..................................................... 43
  Importing Data Points .............................................. 46
Power .............................................................................. 48
  Alternative Units ...................................................... 48
Plotting Kinematic Results ........................................... 51
  Absolute vs. Relative Values ................................. 51
  Output Coordinate System ...................................... 52
  Angular Displacement Plots ..................................... 56
  Angular Velocity and Acceleration Plots .................. 59
Summary ........................................................................... 60
Exercise 2: Piston ......................................................... 61
Exercise 3: Trace Path ................................................ 67

Lesson 3:
Introduction to Contacts, Springs and Dampers

Objectives ...................................................................... 71
Contact and Friction .................................................... 72
Case Study: Catapult .................................................... 72
  Problem Description ................................................ 73
  Stages in the Process ............................................... 73
  Interference Detection .............................................. 77
Contact .......................................................................... 79
  Contact groups ......................................................... 80
Contact Friction ........................................................ 81
  Translational Spring ................................................. 82
    Magnitude of Spring Force ..................................... 83

Lesson 5: Curve to Curve Contact

Objectives ................................................................. 149
Contact Forces ......................................................... 150
Case Study: Geneva Mechanism ........................................... 150
  Problem Description .................................................. 150
Curve to Curve Contact .................................................. 151
Solid Bodies vs. Curve to Curve Contact .............................. 156
Solid Bodies Contact Solution ........................................... 157
Summary ................................................................. 157
Exercise 9: Conveyor Belt (Curve to curve contact with friction) .. 158

Lesson 6: Cam Synthesis

Objectives ................................................................. 161
Cams ................................................................. 162
Case Study: Cam Synthesis .................................................. 162
  Problem Description .................................................. 162
  Stages in the Process .................................................. 162
  Generating a Cam Profile ............................................. 163
Trace Path ............................................................. 165
Exporting Trace Path Curves .......................................... 166
  Cycle Based Motion .................................................. 169
Exercise 10: Desmodromic Cam ........................................ 173
Exercise 11: Rocker Cam Profile ....................................... 179

Lesson 7: Motion Optimization

Objectives ................................................................. 187
Motion Optimization ..................................................... 188
Case Study: Medical Examination Chair .............................. 188
  Problem Description .................................................. 188
  Stages in the Process .................................................. 188
Sensors ................................................................ 191
  Design Studies ......................................................... 194
  Parameters .............................................................. 195
Optimization Analysis .................................................... 195
  Global Variables ....................................................... 196
## Lesson 8: Flexible Joints

Objectives .......................................................... 201
Flexible Joints ...................................................... 202
Case Study: System with Rigid Joints ......................... 202
  Problem Description ........................................... 203
  Stages in the Process ......................................... 203
  Calculation of Wheel Input Motion ......................... 205
  Understanding Toe Angles ................................... 208
System with Flexible Joints ..................................... 209
Summary ........................................................... 211
References ........................................................ 211

## Lesson 9: Redundancies

Objectives .......................................................... 213
Redundancies ...................................................... 214
  What are Redundancies? ....................................... 217
  Effects of Redundancies ...................................... 218
  How are Redundancies Removed in the Solver? .......... 219
Case Study: Door Hinges ......................................... 219
  Problem Description .......................................... 219
  Degrees of Freedom Calculation ............................ 222
  Total Actual and Estimated DOF ............................ 222
  Using Flexible Joints Option to Remove Redundancies .. 225
  Limitations of Flexible Mates ............................... 226
  Bushing Properties ........................................... 227
How to Check For Redundancies ............................ 229
Typical Redundant Mechanisms .............................. 229
  Dual Actuators Driving a Part .............................. 229
  Parallel Linkages ............................................. 230
Summary ........................................................... 230
Exercise 12: Dynamic Systems .............................. 231
Exercise 13: Dynamic Systems 2 ............................ 232
Exercise 14: Kinematic Mechanism .......................... 234
Exercise 15: Zero Redundancy Model-Part 1 ............... 239
Exercise 16: Zero Redundancy Model-Part 2 (Optional) ... 243
Exercise 17: Removing Redundancies with Bushings ....... 244
Exercise 18: Catapult .......................................... 251
Lesson 10:  
Export to FEA

Objectives ............................................................... 257
Exporting Results ....................................................... 258
Case Study: Drive Shaft ............................................. 258
  Project Description .................................................. 258
  Stages in the Process .............................................. 259
  FEA Export ........................................................... 262
  Load Bearing Faces ................................................ 263
  Mate Location ......................................................... 263
Export of Loads ......................................................... 263
SOLIDWORKS Simulation Users Only ......................... 267
Direct Solution in SOLIDWORKS Motion ....................... 274
Summary ................................................................. 278
Exercise 19: Export to FEA ....................................... 279

Lesson 11:  
Event Based Simulation

Objectives ............................................................... 285
Event Based Simulation .............................................. 286
Case Study: Sorting Device ........................................ 286
  Problem Description ................................................ 286
Servo Motors ........................................................... 286
Sensors ................................................................. 288
Task ................................................................. 290
  Summary ............................................................. 294
Exercise 20: Packaging Assembly ............................... 297
